

ARCHITECTURAL FLOORING

DUR-A-FLEX
INNOVATION FROM THE FLOOR UP

The right spec every time.

Knowledge, creativity, expertise and a commitment to bringing value to your clients, it's what you deliver in the projects you bring to life. And that's exactly what we provide to you in order to speed up the design process and to put you ahead of schedule.

Whether your projects are Commercial, Industrial or Institutional, we are here to help you every step of the way. Our technical support team, sales representatives and network of nationwide-approved contractors are just a phone call away.

Our environmentally friendly product line includes products that meet LEED® requirements such as VOC compliance (low emitting) and reducing jobsite waste (requires no trimming or cutting waste as with carpet, tile or sheet goods). In addition to sustainable LEED® project certification needs, we have developed products that deliver additional value to the building owner by reducing their maintenance costs and increasing light reflectivity while providing a world class environment that starts from the floor up.

Our technical support team, sales representatives and network of nationwide-approved contractors are just a phone call away.

Restaurants and Foodservice

Now you can select flooring that offers the style and good looks consistent with any theme or décor requested by your client without making sacrifices on performance. Floors need to resist staining from the spills that happen day to day while holding up to all of the wear and tear customers bring through the doors... and do it all while looking new. Kitchens are the backbone of the business. Durable, slip resistant and without difficult to keep clean grout lines, a Dur-A-Flex seamless floor makes performance flooring "the special of the day."

Retail and Grocery

In today's world of retail chains and grocery stores with multiple locations, specifying a floor that helps your client reduce the cost of ongoing maintenance can mean significant savings year after year. Retailers can select a variety of looks to fit their décor while still having flooring options that can shorten installation times to reduce or eliminate downtime during renovations. When it comes to new construction, Dur-A-Flex® floors can be installed over 5-7 day old concrete, speeding up construction and getting your clients to open their doors sooner.

Healthcare

Hospitals, ambulatory care and dialysis centers face constant traffic from patients, staff, equipment and beds. The need to keep a sterile and clean environment at all times is a necessity. Our durable, sanitary and easy to maintain flooring system can also help contain costs by reducing annual maintenance costs. Floor systems are available in a variety of styles and colors while contributing to LEED® project needs.

Education

Schools and universities are among the busiest, highest traffic facilities anywhere. Specifying a floor that offers lower maintenance costs and long service life delivers added value to your clients. Our environmentally-friendly flooring options are available in a variety of styles and colors that contribute to LEED® project needs such as low emitting, IAQ standards and by reducing jobsite waste.

Food and Beverage Manufacturing

Whether your project is a bakery, meat and poultry plant, bottling line, dairy, cannery or brewery, floor systems need to be formulated to withstand a variety of oils, grease, food and mineral acids, strong alkalis and acid-based cleaners. Worker protection and food safety are critical in this highly regulated market. That's why Dur-A-Flex floor and wall systems are the first choice for many top food processors.

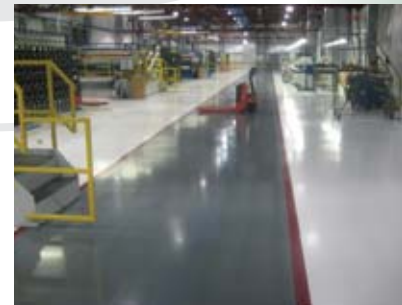

Hospitality and Entertainment

Hotels, resorts, casinos, stadiums, coliseums and theme parks want to show off their style. Whether for indoor or outdoor applications, we can deliver floors that won't show wear patterns in busy areas while providing the necessary slip resistance. Complete repairs overnight without having to shut down or rejuvenate old facilities to extend the life of the building.

Manufacturing and Industrial

Selecting the right flooring for manufacturing and industrial facilities projects is critical to keeping their operations up and running – downtime caused by flooring failure means lost revenue. Creating a world class facility begins with a bright, safe environment for employees and showcases the facility to existing or potential customers.
